

CHAMIDU PETHUM

Software Engineering Intern

+94 71 84 64482 100/A/14, Malpeththawa, Ambalantota
✉ bcpethum@gmail.com  LinkedIn  My portfolio  GitHub

SUMMARY

Results driven Software Engineering undergraduate with practical experience in full-stack web development and mobile application development. Proficient in Python, JavaScript, React.js, Express.js, MERN stack, ASP .NET, and RESTful APIs. Strong background in building responsive, scalable, and user-focused applications through academic and self-driven projects. Possesses excellent problem-solving, teamwork, and communication skills with a passion for continuous learning and innovation. Seeking an opportunity to contribute as a Software Engineer Intern.

EDUCATION

BSc (Hons) in Software Engineering 2023 – 2027 (Expected)
Sabaragamuwa University of Sri Lanka

H/ Therapuththa National School 2018 – 2021
Advanced Level: Combined Mathematics(A), Physics(B), Chemistry(C)

SKILLS

Technical Skills

- **Programming Languages:** Python, JavaScript, SQL, ASP.NET
- **Web Development:** React.js, Express.js, HTML, CSS, Tailwind CSS
- **Databases :** MySQL, PostgreSQL, MongoDB
- **Mobile App Development:** React Native (Expo)
- **Tools & Technologies:** Git, GitHub, Jira, Postman, Figma, Visual Studio Code, AntigraVity.
- **Concepts & Practices:** REST API, MVC Architecture, JWT Authentication, OOP, Agile, Scrum, CI/CD

Soft Skills

- Teamwork, Problem-Solving, Creativity, Communication, Critical Thinking, Adaptability, Time Management Decision-Making

PROJECTS

ConfidFace – AI-Based Facial Emotion Analysis for Interview Feedback (Group) 2025 - Completed 
Mini Project (3 Members) | Tech: React.js, MongoDB, WebRTC, Akool API, Tailwind CSS

- Developed an AI-powered web application that analyzes facial expressions in real-time to evaluate user confidence during mock interview sessions.
- Designed a confidence scoring engine with personalized real-time and post-session feedback to improve interview performance.
- Built a user dashboard with session history, progress analytics, and report generation using React.js, and MongoDB.

SaveBite – Sustainable Food Redistribution Platform (Group) 2025 – Completed 

Web Project (3 Members) | Tech: HTML, CSS, JavaScript, Node.js, Express.js, MongoDB, RESTful APIs, JWT

- Developed a full-stack web platform that connects local food businesses with customers to sell surplus near-expiry food items at discounted prices, reducing food waste.
- Implemented secure role-based authentication for Customer and Business users using JWT, with separate dashboards and access control.

- Built core e-commerce features including food listings, filtering, multi-vendor cart management, checkout, pickup scheduling, and order tracking.
- Designed scalable REST APIs and MongoDB database models for users, listings, carts, and orders, ensuring efficient data handling and system performance.

Health AI – Real-Time AI Health Voice Assistant 2025-2026

Individual Project | Tech: Next.js, React.js, TypeScript, AssemblyAI, Clerk, Neon DB, REST APIs

- Developed a real-time AI-powered health voice assistant that converts spoken user input into instant medical insights using speech recognition and AI processing.
- Implemented secure user authentication and session management using Clerk, ensuring protected access and personalized user experiences.
- Built responsive frontend interfaces with Next.js, React.js, and TypeScript for seamless voice interaction and real-time result visualization.
- Designed scalable cloud database integration with Neon DB to store user sessions, health queries, and generated insights efficiently.

MyTurn – Smart Fuel Queue Optimization System (Group) 2026 – Ongoing

Community Project (5 Members) | Tech: React.js, Next.js, Node.js, Express.js, MySQL/PostgreSQL, JWT, WebSockets, Google Maps API

- Developing a web-based smart fuel queue management platform to reduce congestion and waiting time at fuel stations through digital tokening and scheduled bookings.
- Implemented secure role-based authentication for Users, Fuel Station Staff, and Admin with JWT-based access control.
- Designed real-time queue tracking with token status updates, estimated waiting times, and automated notifications using WebSockets/Firebase.
- Built management dashboards for fuel stations and admins to monitor bookings, control vehicle flow, analyze peak demand, and optimize fuel distribution operations

EXTRACURRICULAR ACTIVITIES & LEADERSHIP

- Logistic Team Member at SabraXtreme 3.0 [🔗](#)
- Program Team Member at IEEE Day Celebration 2025 [🔗](#)
- Volunteer - Graphic Designer for Next Step [🔗](#)

LICENSES & CERTIFICATES

- Python for Beginners – CODL and University of Moratuwa [🔗](#)
- Flutter Course– DP Education IT Campus [🔗](#)
- Foundation for Cybersecurity – Coursera
